Summary

Computer Science undergraduate and mobile developer experienced in building cross-platform Flutter applications with real-time data, cloud backends, and AI integrations. Skilled in REST APIs, WebSockets, and backend development using Python and FastAPI. Passionate about building intelligent mobile applications that combine cloud services, real-time analytics, and AI-driven features.

Experience

Research Intern

Samsung PRISM (Samsung Research)

- Implemented DFA-based text normalization for multi-locale systems (numbers, currency, date/time).
- Formalized deterministic parsing logic to reduce ambiguity in rule processing.
- Contributed through structured technical reviews and milestone evaluations.

01/2026 – Present
Bengaluru (remote)

AI App Developer Intern

Antariksha Labs

- Integrated LLM-based features (chatbots, NLQ interfaces) using modern APIs and prompt pipelines for real-world applications.
- Built and optimized Retrieval-Augmented Generation (RAG) pipelines with vector databases for context-aware responses.
- Developed and deployed on-device ML models (TensorFlow Lite) for OCR and offline-first capabilities.

04/2026 – Present
Bengaluru (remote)

Projects

PaperMind

Offline AI Document Intelligence Workspace

- Built an offline AI workspace using Flutter, FastAPI, PostgreSQL (pgvector), and Ollama.
- Designed an end-to-end RAG pipeline with semantic chunking, vector embeddings, hybrid retrieval, and local LLM inference for fully offline document intelligence.
- Developed a FastAPI backend with asynchronous processing, PostgreSQL + pgvector storage, encrypted API key management, and Docker/native deployment support.

Real-time Search & Chat System (FastAPI + WebSockets)

- Built a Flutter mobile application that allows users to query documents using AI
- Implemented Retrieval Augmented Generation (RAG) pipeline for contextual answers.
- Integrated FastAPI backend and LLM APIs to provide intelligent responses.
- Designed UI for real-time query interaction and document retrieval.

Live Demo: <https://perplexity-clone-ai.web.app>

Flutter Blog Platform with Clean Architecture

- Developed a cross-platform Flutter blog application with authentication and CRUD features.
- Implemented Clean Architecture with BLoC state management.
- Integrated Supabase (PostgreSQL) backend for content storage and API communication.

Live Demo: <https://flutter-blog-app-clean.web.app>

Skills

Programming: Python, C++, Dart, SQL

App Development: Flutter, Android App Development, Clean Architecture, BLoC, REST API Integration

Backend & APIs: FastAPI, WebSockets, REST API design

Databases: MySQL

Cloud & DevOps: AWS (EC2, IAM), Docker

AI Integrations: LLM APIs, Retrieval Augmented Generation (RAG), NLP-based query systems

Education

B.E. in Computer Science and Engineering

BMS College of Engineering • Currently in 3rd year

Relevant Coursework: Data Structures & Algorithms, OOP, DBMS, Operating Systems

08/2023 – 07/2027

Bengaluru, Karnataka
